

## Java

```
class Solution {  
    public String discountPrices(String sentence, int discount) {  
  
    }  
}
```

---

## JavaScript

```
/**  
 * @param {string} sentence  
 * @param {number} discount  
 * @return {string}  
 */  
var discountPrices = function(sentence, discount) {  
  
};
```

---

## TypeScript

```
function discountPrices(sentence: string, discount: number): string {  
  
};
```

---

## C++

```
class Solution {
```

```
public:
    string discountPrices(string sentence, int discount) {

    }
};
```

---

## C#

```
public class Solution {
    public string DiscountPrices(string sentence, int discount) {

    }
}
```

---

## Kotlin

```
class Solution {
    fun discountPrices(sentence: String, discount: Int): String {

    }
}
```

---

## Go

```
func discountPrices(sentence string, discount int) string {

}
```

---
